Experimental work with viruses has provided important evidence that genes are made of nucleic acids. Viruses were also important in working out the molecular mechanisms of DNA replication, transcription, and translation. Viruses have been important in the development of techniques of manipulating and transferring genes.

Chapter 19: Viruses

Viruses are the smallest and simplest life form known. They are 10 to 100 times smaller than bacteria.; The biggest difference between viruses and bacteria is that viruses must have a living host - like a plant or animal - to multiply, while most bacteria can grow on non-living surfaces.

Chapter 19 (Bacteria/Virus) and 40-2 The Immune System

Viruses infect all forms of organisms including bacteria, archaea, fungi, plants, and animals. Living things grow, metabolize, and reproduce. Viruses replicate, but to do so, they are entirely dependent on their host cells. They do not metabolize or grow, but are assembled in their mature form.

12.1 Viruses - Concepts of Biology - 1st Canadian Edition

1. When a virus takes over the machinery of a cell it forces the cell to manufacture more: 	a. 	mitochondria for energy for the virus. 	b. 	liposomes to isolate themselves from water 	c.
