A calculator is ne, but a laptop is not. You have two hours. Problem 1. Questions from all over. a. In class we showed that the one-time pad is malleable.

Final Exam - Applied Cryptography Group | Stanford University
Solution To estimate the period we use the Kasiski test. The distance between the two oc-currences given is 241 10 = 231 = 3 7 11 positions. Possible periods are thus 3, 7 and 11. If the guess is correct, we can immediately nd the corresponding shifts: at position 10 the shift is T c= 19 2 = 17 = r .

Selected Topics in Cryptography Solved Exam Problems
2 exams both in class. The first exam (midterm) covers parts 1 and 2 of the course, and the second exam (final) covers parts 3,4,5. Both are closed book. Tentative date for the midterm is 10/22, and the final exam is on 12/10. Practice Questions for Midterm Exam Midterm Exam Practice Questions for Final Exam. 5 Homeworks.
