The Millennium Problems are seven problems in mathematics identified by the Clay Mathematics Institute as being particularly difficult and important. A one million dollar prize is offered for the solution of each problem. The awards have something of a precursor going back to 1900 when David Hilbert posed 23 problems of importance to mathematics.

THE MILLENNIUM PROBLEMS: THE SEVEN GREATEST UNSOLVED ...

The Millennium Prize Problems are seven problems in mathematics that were stated by the Clay Mathematics Institute on May 24, 2000. The problems are the Birch and Swinnerton-Dyer conjecture, Hodge conjecture, Navier-Stokes existence and smoothness, P versus NP problem, Poincaré conjecture, Riemann hypothesis, and Yang-Mills existence and mass gap. A correct solution to any of the problems results in a US\$1 million prize being awarded by the institute to the discoverer(s). To date, the ...

The Navier-Stokes equations were first written down in the early 1820's, Riemann made his hypothesis in an 1859 paper, and the Poincaré conjecture dates from 1904. The remaining problems arose in the period 1950-1971. In The Millennium Problems, Keith Devlin aims to communicate the essence of these seven problems to a broad readership. It is, of course, a very ambitious goal.
