### Travis vs GitLab CI detailed comparison as of 2020 - Slant

GitLab and Travis CI are primarily classified as "Code Collaboration & Version Control" and "Continuous Integration" tools respectively. Some of the features offered by GitLab are: Manage git repositories with fine grained access controls that keep your code secure Perform code reviews and enhance collaboration with merge requests

### GitLab vs Travis CI | What are the differences?

When Travis CI has been activated for a given repository, GitHub will notify it whenever new commits are pushed to that repository or a pull request is submitted. Travis CI will then check out the relevant branch and run the commands specified in .travis.yml, which usually build the software and run any automated tests.

### Travis CI vs GitLab

CircleCI - Automate your development process quickly, safely, and at scale. GitLab CI - GitLab integrated CI to test, build and deploy your code. Travis CI - A hosted continuous integration service for open source and private projects

### CircleCI vs GitLab CI vs Travis CI | What are the differences?

GitLab CI - GitLab integrated CI to test, build and deploy your code. Jenkins - An extendable open source continuous integration server. Travis CI - A hosted continuous integration service for open source and private projects

### GitLab CI vs Jenkins vs Travis CI | What are the differences?

As far as I understand, the main difference is that gitlab-ci is opensource (you can install it on your own server) and travis-ci isn't. So then the latter is always cloud/service-based. And it's free for open source projects. But then GitLab.com (the company, not the software) also has a cloud version that you don't need to install: ci.gitlab.com. And I'm guessing this version can only be used with public repositories posted in your Gitlab account.

### How do travis-ci and gitlab-ci compare? - Stack Overflow

Travis CI enables your team to test and ship your apps with confidence. Easily sync your projects with Travis CI and you'll be testing your code in minutes.

### Travis CI - Test and Deploy Your Code with Confidence
