Weatherking Furnace Troubleshooting & Repair | Repair Clinic

If the flame sensor does not detect a flame, the control board will shut off voltage to the gas valve to prevent the furnace from heating. Sometimes, if the flame sensor is dirty, it will fail to detect a flame. Try cleaning the flame sensor with a fine abrasive pad. If the furnace still doesn't heat, replace the flame sensor.

Its in the blower section. If the furnace is an upright one, like in a basement then its the lower section of it. There should be a little round window that you can look through to see the fault light. Let me know if you see that? If not tell me what the furnace does if you turn it off and back on again, it should start a small vent motor first.
