The E160P features two amplifiers, one for the high frequency tweeter and one for the woofer. The E160P is thermally protected . If the amplifier's heatsink is blocked in any way, the output will gradually attenuate until it is thermally acceptable to the amplifier, otherwise it will continue to reduce power and eventually shut down. The

### Yorkville

The new E10P does not have a Ground Lift button- which I thought was a really cool thing that the E160P had-super useful. Plus I'm pretty sure the E10P has an internal fan to help with cooling and the E160P was purely passive cooling- No fan on the E160P means one less thing to go wrong, one less thing to rattle around, no fan=quieter operation when standing still with no sound pumping through it.
