Z-Profiles, with their optimum distribution of material, are the most efficient sheet piling sections available for bending strength. With the interlocks located on the outer fibers of the wall — rather than at the center line, as is the case with Arch or U-Profile sheet piling sections - the wall designer is assured of the published ...

Cover Plated Sheet Piles. Sheet piles can be plated to increase their strength. Usually four plates are attached to the outside of the flanges of a Z pile. The plates can be composed of many different lengths, widths, and thicknesses. The width and thickness of the plate should be governed by the need for either higher strength or stiffness.

Z-Piles are commonly used for Cantilevered, Tied-Back, King Pile and Combi-Wall retaining systems. Additional applications also include load bearing bridge abutments. Flat Sheet (PS) Piling Products. Compared to Z - Pile, PS sheet piles offer minimal beam strength. They are typically used for circular cell design.
